

## Multi-discipline Team

### *Lekwungen Community Portal 2017*

**Sponsor:** Mr. Lyle Henry, *Employment and Training Program Coordinator of Songhees Nation*

**Members:** Ben Tolson, Kevin Turner, Connor Quinn and Myriam Saavedra

The Lekwungen Community Portal is built by Ben Tolson, Kevin Turner, Connor Quinn, and Myriam Saavedra. It will serve the Songhees community as a means of communication and as a storage place for culturally significant content such as songs, stories and family trees. It will also include a job board to assist members of the Songhees Nation in preparing for and finding employment.

#### Ben Tolson

He is currently studying computer science at Camosun College. He has always enjoyed learning and solving puzzles. He is skilled in *design* and *implementation* of *code*. After the project he plans to work with the Vancouver Island Health Association.

#### Kevin Turner

He has been interested in *computing* and *web development* since he was introduced to it as a teenager. After beginning his education at UVIC he transferred to the CST program at Camosun, and found the tools and support he needed to learn the skills to pursue a career in tech. Kevin loves the advent of new technologies and is deeply interested in putting them to use in our everyday lives.

#### Connor Quinn

Connor Quinn signed up for the Computer Systems Technology program after taking trying out criminology and deciding it wasn't for him. He took a gap-year and chose to sign up for the Computer Systems Technology program after some inspiration from a friend who owns his own computer business. He enjoys *graphic design* and helping people troubleshoot their computer problems. After school he hopes to make the best of his co-op with the government and land a full-time job.

#### Myriam Saavedra

She worked 7 years in the software applications industry in Quito-Ecuador, distinguishing herself as a good problem solver. However, she has always had a passion for *numbers* and *teaching*, which motivated her to get a master's degree in Applied Mathematics. After 8 ½ years living in BC and with 3-years old twin boys, she decided to go back to study to enhance her IT knowledge and skills. She is now ready to embark on a new workplace adventure.

The team would like to sincerely thank the following people that helped them with planning and implementation of this Capstone project to: Dr. Marla Weston, who provided a link with the client and the previous Capstone team; Mr. Lyle Henry, our client for putting his trust in us; and Saryta Schaerer Chair, Computer System Technology, for helping to provide the essential framework for the Capstone projects.
