

Team Escapé – Victoria Zumbini Website

Team Escapé is proud to be working with the Victoria Zumbini Program to develop their new home on the web. The Victoria Zumbini Program is a leader in promoting fitness and early childhood development in the Capital Region. Victoria Zumbini are an independent group who, fill a unique niche by providing the fun and energy of Zumba classes to children aged 0-3.

The Victoria Zumbini Website project was created to revolutionize the Zumbini program's presence on the web. The new website, VictoriaZumbini.com, has been reconstructed from the ground up to streamline the online registration process across multiple devices. The site is built on a modern Content Management System, and features back-end database technology which will support Victoria Zumbini as they transition to a completely paperless system.

Saul Barrios will be responsible for database programming and quality assurance for the project. Saul brings his wealth of previous experience in the customer service and tech support fields to bear, ensuring execution is secure and meets exacting standards.

Eric Prothero-Brooks brings a natural aptitude for PHP to the project, and will be responsible for the majority of server-side programming.

Chris Wallace draws on his artistic inclination and experience with HTML to construct the user interface and CMS components of the project.

Team Escapé is excited to see how the Victoria Zumbini Website project will continue to grow and develop. Our hope is to provide a stable platform so Zumbini can bring early childhood physical development to the community online.

We would like to thank our capstone sponsor, Celine Hall, for her invaluable advice and support.
