

Integrated Creative Platforms (ICP) provides software solutions for clients who need unique fixes to their problems. We take a quality over quantity development philosophy that is reinforced by our team's broad skillset. Our strategy is built on producing eloquent software no matter how unconventional the goals. We have partnered with Shea Phillips of KeyStone Systems to develop a web enabled intercom.

The KeyStone Intercom is a smart intercom that allows Visitors to personally contact building Tenants via a phone notification triggered from an intercom. Tenants are able to manage their own data including contact schemes and notification forwarding. Managers of the system are able to administer access points, users and view log data. These management functions are available via a web interface powered by a cloud based server.

<b>Joel Schwabe</b>	<b>Ben Norbury</b>	<b>Martin Talbot</b>
Joel is an enthusiastic programmer who has strong skills in database creation and design. He is willing to take risks and is never intimidated by new challenges. Frequently, he is the catalyst that pushes the team closer to the solution with his "head first" approach.	Ben is an experienced and versatile software engineer. His library of knowledge gives our team options when deciding on how to develop solutions. Coupled with his strong analytic abilities, he is also a tireless problem solver.	Martin is programmer with skills in project design and management. He is keen on meeting clients' needs through responsive feedback during development. Deadlines fuel his passion to perform and deliver a lean and functioning platform to the client.

ICP would like to thank Shea Phillips for sponsoring this project. His guidance has aided our understanding of modern development practices and current technology. The KeyStone Intercom reflects our trademark style and we hope to see it in production soon.
