

## Team ClipBase

Team ClipBase is working on the Elex Course and Supplies Tracking System for the Electronics department at Camosun College. Together they'll be developing a web-based application to improve the management and organization for the lab equipment in the storage room.

### Matthew Singleton

Matthew started programming in grade nine where he got deeply invested into programming. Creating a variety of small projects from games to a LAN messaging program. He has wanted to get into a programming related career due to the fun problem solving and creativity involved in this field.

Role: Project Manager

### Jack Christie

While working in health care, Jack realized that technology plays a huge role in our well-beings. He is changing career from healthcare to technology because he believes he can serve people better with the technology he has learned. Jack's technological interest leans towards working on healthcare-related or web-based applications with database management after graduation.

Role: System Analyst, Developer

### Douglas Garard

Douglas Garard was always interested in working with computers. Back in high school he would ace his computer assisted drafting courses, got his certificate in 3D modelling, arts and animation in BCIT, and is currently finding his way to work for the BC government. He works fairly well with most coding language, though his strongest (and most favourite to work with) would be SQL, HTML, and C++.

Role: Database Designer

We'd like to give a warm thanks to our sponsors Elex and Camosun for giving us this opportunity, and our faculty supervisor Andy Reid for helping us along the way. We'll be looking forward to completing this project together!
