

## Reality Bytes Team Bio

Reality Bytes is developing a mobile application and a web application for Three Trees Technical, a software development and technical consulting firm located in Victoria, BC, Canada. When complete, the application will allow users to vote on live-stream talent competitions. Additionally, administrators will be able to use the web application to analyze voter data and post results.

### Team Members

Figure 1: Team Reality Bytes (l to R, Ken, Liyani, Amy, Robert)

#### Ken Brown

Ken enjoys problem-solving and finds great satisfaction in learning new skills. He is most interested in integrating the various pieces of this project into a working prototype. During development, Ken will be focused on programming and testing.

#### Robert Cook

Bob is a lifelong learner that always welcomes the opportunity to develop new skills. He is keen to contribute to both the design and functionality of this project. Bob plans to be involved in all aspects of this project during the development process.

#### Liyani Lustado

Liyani loves to code and is very interested in web development and technical programming. He is excited to develop the back-end of the project. Liyani's main focus will be programming and user interface design.

#### Amy Martin

Amy has a passion for creative technology and is particularly interested in front-end development. She is really looking forward to the design and aesthetic aspects of the project. Amy hopes to take on more of a leadership role throughout the development process.

Reality Bytes would like to thank Ben Leather and everyone at Three Trees Technical for the opportunity to work alongside them on this project and for the fantastic assistance they have provided. We would also like to thank the Camosun College ICS faculty, particularly our faculty sponsor Doug Greening and the department chair Saryta Schaerer, for providing us with the abilities necessary to succeed in this industry and pushing us to achieve our best.
