

## Team Members

<b>Uday Patel</b>	<b>Micha Maxwell - Lake</b>	<b>Matt Price</b>
udaypatel5858@hotmail.com	m.maxwell.lake@gmail.com	matt.price@shaw.ca
		

## Project Sponsor

**Kevin White** – South Island Distance Education School [SIDES] Principal

## Faculty Supervisors

**Jason Cumiskey** – cumiskey@camosun.bc.ca

**Deid Reimer** – reimer@camosun.bc.ca

## Introduction

Our client and Project Sponsor, Kevin White, requested that our team create a single sign-on system in order to decrease the number of login credentials one must remember to only one for all courses. This project benefits both the client and its students who will be using the single sign-on system.

## Project Description

Our project involves incorporating CAS (Central Authentication Service) that will allow SIDES students to enter their login once only without the need to login through additional services. A web portal will be created in order for students to have a central point in which to view or proceed to their courses.

## Individual Team Background

**Micha Maxwell-Lake** – *Lead Programmer/Database Developer*

Having used computers since the age of five, Micha has discovered a natural aptitude for computer technology. With his passion for all things creative, Micha has explored many disciplines in both art and science. He has found his greatest strengths in database and web application development and administration. He hopes to find a successful career in the public sector or his own technical consulting company.

**Matt Price** – *Developer/Programmer*

Matt has been interested in computers since he was in elementary school. He has ten years of web development experience and is excited to continue his career upon graduation from Camosun College's CST program.

**Uday Patel** – *Front End Designer/Developer/Programmer*

Uday has been creating web sites personally since he was barely 15, so he turned that into a hopeful career when he successfully finished Web Design Certification Program at Camosun College. His niche of passion in designing, the creativity and challenges that go with it, he plans to create his own company.

## Thank You

Maximum Systems and Designs would like to take this opportunity to thank everyone involved to make this project a success by supporting us with their guided assistance and faith in our abilities. Special thanks to Kevin White for giving us this opportunity as we have thoroughly enjoyed the fun but yet challenging experiences this project has provided. We would also like to extend our thanks to the technical staff at the school including Aaron, Bev, and Warren for their wonderful assistance and infinite patience.
