

TimeSavers

Team Bios

The current Camosun College student registration system does not provide any course scheduling tools. Developing an optimal course schedule can take students many hours to do manually. The TimeSavers team has taken on the project of developing a better solution. With the support of our sponsors, Murray Smith and Brad Payne, from Camosun College IT (Information Technology) services, we are developing the TimeSavers course scheduling tool.

Jason Keddie

Jason worked as an IT consultant for over a decade before returning to school to complete a Diploma in Arts and Science Studies before moving on to the Computer Systems Technology program. Jason's interest in efficient, well-designed computer-human interfaces is what lead him to spearhead this Capstone project. Jason hopes that this project will save thousands of hours of students' time.

Shane Le Gresley

Shane has always been interested in computers and electronics. This passion for technology has taken him into many careers in related industries. Like many mature students Shane returned to school to upgrade his skills. He is finishing his diploma in Computer Systems Technology and is proud to be a part of the TimeSavers project.

Matthias Ruhland

Matthias was born and raised in Germany. At the age of 12 he immigrated to Canada with his family. He got into the field of technology fairly late, having very little experience before entering the Computer Systems Technology program at Camosun. Yet he enjoyed it from the start and decided technology was the right career path for him.

The Timesavers team would like to thank Camosun College IT Services for giving us the opportunity to develop this course scheduling tool for Camosun students. We know that our tool will make it easier for students to find the best schedule for their classes. It is easier to see your schedule than read your schedule!
