Gamified Wiki Team Bios

Introduction & The Project

Crowd Content has recently approved the Gamified Wiki project to move forward for initiation. The Gamified Wiki will result in the development of a new wiki framework focused on providing incentives to writers based on their contributions. This will be done by implementing gamification tools such as points and leveling up based on the quality of the content submitted. There is Wiki software currently available, but Crowd Content believes that writers will be encouraged to contribute more high quality content when provided with incentives
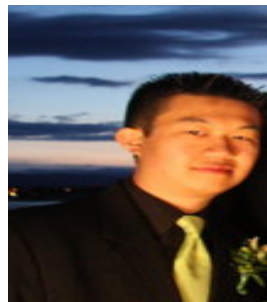

Crowd Content already runs a successful online matching service that allows customers to commission a written work and matches them up with the writer best suited to their needs. The Gamified Wiki Project will allow Crowd Content to branch out and experiment with new and exciting writer collaboration technology separately from their current infrastructure.

Team Members

Sean C Roberts – *Project Manager / Lead Developer & Tester*

Sean was always strongly interested in technology and its operation; he pursued his learning in hardware design and development by starting his post-secondary education with mechanical engineering. Sean then moved on to drafting, and now has found himself discovering the inner workings of software. As the Project Manager Sean frequently works to mediate relations between group members. He also organizes the meetings and work periods to increase productivity and work flow. Sean deals with the majority of communications with people related to the project but not in the group, such as the weekly updates for the Project Sponsor. Altogether, Sean is good at staying organized and moving the project forward.

Vinh L Nguyen – *Documentation Leader / Developer & Tester*

By the end of Grade 12, Vinh was unsure of the career path that he wanted to pursue. He decided to enroll himself in the Computer Systems Technology program at Camosun College. He enjoyed the program from the start and decided that the technology field was right for him. As the team's Documentation Leader, Vinh deals with the preparation and formatting of the technical documentation. He ensures that the documents are complete and laid out in a professional manner. Vinh also deals with the submission of the documents, making sure all documents are submitted on time.

Graham D Grayson – *Lead Technical Writer / Developer & Tester*

Graham was introduced to computers and their operation by his father at the age of five. He began his technology education in high school; where he learned how to build basic websites and programs. Realizing that he had found his true calling, Graham decided to enroll in the Computer Systems Technology program at Camosun College. As the Lead Technical Writer for the team, Graham writes the bulk of the technical documentation required for the completion of the project. Graham also keeps the team on track during group writing sessions, ensuring that all sections of the current document meet professional standards.

Conclusion / Thank You

The Gamified Wiki Team would like to thank our project sponsor Clayton Lainsbury, CEO of Crowd Content. We would also like to thank everyone else who was involved with the development process for his or her support.
