

# JAG

JAG is excited to be working with Proline Management - a property management company on Vancouver Island that provides management services for all types of real estate. We will be providing Proline with the Key Tracking Application (KTA) - a web-based, multi-user interface to provide real-time inventory management of Proline's property keys. This application will work in conjunction with barcode scanning hardware to streamline Proline's operations activities.

## Jesse Johnston

Jesse has a keen interest in data collection and software engineering. His previous education and work experience has often led him into administration. He hopes to continue developing these skills in the field of computer science. After graduation, Jesse plans to pursue work as a database administrator and develop his skills in pursuit of the advancement of information technology.

## Aidan Ranney

Aidan is passionate about software and is excited about its continuing integration into our daily lives. He has come to see development as a line of work that fosters skills in lateral thinking and continuous learning, both of which improve one's quality of life. After graduation he plans to pursue work in web applications and build skills across the development stack, before continuing further formal education.

## Gary Walsh

Gary greatly admires the technologies, and advances therein, that have become necessary to our everyday life. He joined the ICS program at Camosun College to learn about computer programming and to pursue his dream career as a full stack developer. In addition, he enjoys working with databases and web/mobile applications. After graduation, he hopes to get as much work experience as possible in development before continuing into higher education at a university.

We'd like to thank Adrian Leslie, Mingyang Wang and our other sponsors from Proline Management. Our team would like to thank our many instructors as well as our faculty advisor, John Loewen, and our program chair, Saryta Schaerer. Their collective support, guidance and experience as proven invaluable in our education and in the development of this project.
